- Surface Area = $6a^2$, where 'a' is the length of a side.

2. **Rectangular Prism:** The surface area of a rectangular prism is given by:

- Surface Area = $2(lw + lh + wh)$, where 'l' is the length, 'w' is the width, and 'h' is the height.

3. **Cylinder:** The surface area of a cylinder is calculated as:

- Surface Area = $2\pi r(h + r)$, where 'r' is the radius and 'h' is the height.

4. **Sphere:** The surface area of a sphere is given by:

- Surface Area = $4\pi r^2$, where 'r' is the radius.

5. **Cones:** The surface area of a cone is calculated as:

- Surface Area = $\pi r(r + l)$, where 'r' is the radius and 'l' is the

slant height.
