- Definition and properties of points, lines, and angles.
- Types of angles (acute, right, obtuse).
- Angle relationships (complementary, supplementary).

2. Triangles

- Types of triangles (scalene, isosceles, equilateral).
- Triangle congruence (SSS, SAS, ASA).
- Pythagorean theorem and its applications.

3. Quadrilaterals

- Properties of quadrilaterals (parallelograms, rectangles, squares).
- Calculating the area and perimeter.

4. Circles

- Definitions of radius, diameter, and circumference.
- Area of a circle and sector.
- Chords, tangents, and arcs.

5. Polygons

- Types of polygons (regular and irregular).
- Calculating the interior and exterior angles.

6. Solid Geometry

- Volumes and surface areas of common solids (cubes, spheres, cylinders).
- Properties of three-dimensional figures.
