Congruence Postulates and Theorems

The answer key includes solutions that utilize the primary congruence postulates and theorems, such as:

- **SSS (Side-Side-Side):** Proves congruence when all three sides of one triangle match the corresponding sides of another.
- **SAS (Side-Angle-Side):** Establishes congruence when two sides and the included angle of one triangle are congruent to those of another.
- **ASA (Angle-Side-Angle):** Applies when two angles and the included side are congruent in both triangles.
- **AAS (Angle-Angle-Side):** Used when two angles and a non-included side are congruent.
- **HL (Hypotenuse-Leg for right triangles):** A specific postulate for right triangles focusing on the hypotenuse and one leg.

Properties of Congruent Figures

The answer key also elaborates on the properties that congruent figures share, including equal corresponding sides, equal corresponding angles, and congruent perimeters and areas when applicable. Understanding these properties is vital for solving problems efficiently and accurately.
