The 7-way connector typically has seven pins or terminals, each serving a specific function.

The Functions of Each Pin

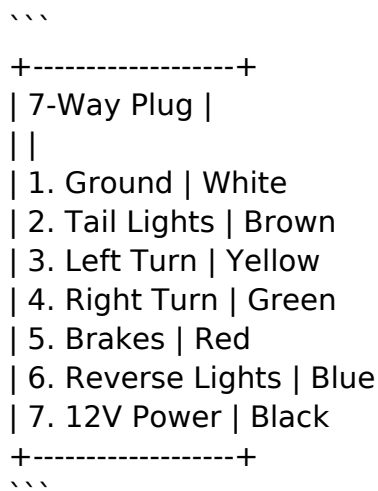

Here's a breakdown of each pin and its function in the 7-way RV trailer plug:

1. **Ground (White Wire)** - This wire serves as the ground connection for the entire system, ensuring safety and preventing electrical shocks.
2. **Tail Lights (Brown Wire)** - This wire powers the tail lights and marker lights of the trailer.
3. **Left Turn Signal (Yellow Wire)** - This wire is responsible for the left turn signal lights on the trailer.
4. **Right Turn Signal (Green Wire)** - This wire controls the right turn signal lights.
5. **Brakes (Red Wire)** - This wire activates the trailer brake system, allowing for safe stopping.
6. **Reverse Lights (Blue Wire)** - This wire powers the reverse lights on the trailer, assisting in backing up.
