The topics are carefully selected to build upon previous units, focusing on how markets operate and the government's role in the economy. These areas are essential for understanding the broader economic system and making informed decisions.

Supply and Demand

One of the primary topics covered is the law of supply and demand, which explains how prices are determined in a competitive market. This includes the concepts of market equilibrium, shifts in supply and demand curves, and factors influencing consumer and producer behavior. Mastery of this topic is critical for analyzing how markets respond to changes in external conditions.

Market Structures
