Core Purpose of the Canvas

Key Components of the Business Model Canvas

Alexander Osterwalder's business model canvas is divided into nine essential building blocks, each representing a fundamental aspect of a business. These components work together to outline the logic that a company uses to create value for its customers and generate revenue.

Customer Segments

This component defines the different groups of people or organizations a business aims to serve. Identifying customer segments helps companies tailor their products, services, and marketing strategies to meet the specific needs and preferences of each group.

Value Propositions

The value propositions describe the unique value a company delivers to its customers. This includes products or services that solve customer problems or fulfill their needs, distinguishing the business from competitors.

Channels

Channels refer to the various means through which a company delivers its value propositions to customers. These can include sales outlets, distribution networks, online platforms, and communication strategies.

Customer Relationships

This block outlines the type of relationship a business establishes with its customer segments, such as personal assistance, self-service, automated services, or communities, which influence customer experience.

and loyalty.

Revenue Streams

Revenue streams represent the ways a company earns income from each customer segment. This can include sales of goods, subscription fees, licensing, or advertising revenue.

Key Resources

Key resources are the assets necessary to deliver the value propositions, reach markets, maintain customer relationships, and earn revenues. These resources can be physical, intellectual, human, or financial.

Key Activities
