- Data Types: Familiarity with primitive data types, collections, and custom objects.
- Control Statements: Knowledge of if-else statements, loops, and switch statements.

2. Triggers

- Trigger Syntax: How to write and implement triggers.
- Trigger Context Variables: Understanding the context variables available in triggers.
- Best Practices: Recognizing the best practices for writing efficient triggers.

3. Classes and Methods

- Class Definition: How to define a class and its components.
- Access Modifiers: Understanding public, private, and protected access modifiers.
- Static vs. Instance Methods: Differences between static methods and instance methods.

4. Exception Handling

- Future Methods: Implementing future methods for non-blocking calls.

Sample Apex Quiz Questions and Answers

To help you prepare for your Apex quizzes, here are some sample questions along with their answers:

Question 1: What is the main purpose of Apex triggers?

Answer: Apex triggers are used to perform custom actions before or after changes to Salesforce records. They allow developers to execute code in response to events, such as inserting, updating, or deleting records.

Question 2: How can you prevent recursive triggers in Apex?

Answer: To prevent recursive triggers, you can use a static variable within the trigger. By setting the variable to true after the first execution, you can check its value before running

the trigger logic again.

Question 3: What is the difference between SOQL and SOSL?

Answer: SOQL (Salesforce Object Query Language) is used to query records from a single object or related objects, while SOSL (Salesforce Object Search Language) is used to perform text searches across multiple objects.

Question 4: What are the limits of Apex code execution?

Answer: Apex code execution has several limits, including:

- Maximum CPU time: 10 seconds for synchronous and 60 seconds for asynchronous operations.
- Maximum heap size: 6 MB for synchronous and 12 MB for asynchronous operations.
- Maximum number of SOQL queries: 100 per transaction.

Question 5: Can you execute a DML operation in a trigger after the record has been deleted?

Answer: No, you cannot perform DML operations on records in an "after delete" trigger because the record no longer exists in the database.

Study Tips for Mastering Apex

Here are some effective study tips to help you master Apex and excel in quizzes:
