AP Chemistry Exam Format

The AP Chemistry exam consists of two sections: multiple-choice and free-response. The multiple-choice section includes 60 questions that test knowledge and problem-solving abilities. The free-response section requires students to answer six questions involving chemical calculations, experimental design, and data analysis. The total exam duration is approximately three hours.

AP Biology Exam Format

The AP Biology exam also comprises two sections. The multiple-choice section contains 60 questions covering a broad range of biological concepts. The free-response section includes six questions focusing on data interpretation, experimental design, and synthesis of scientific information. The exam lasts about three hours, with an emphasis on critical thinking and analytical skills.

Scoring and Credit

Both exams are scored on a scale of 1 to 5, with scores of 3 or higher generally considered passing. Many colleges grant credit or advanced placement for high scores, which can influence course selection and degree progression. It is important to check individual college policies regarding AP credit.
