Compatibility

Atlantic Broadband remotes are compatible primarily with their own cable boxes and digital video recorders (DVRs). However, many models support universal remote functions, enabling control of multiple devices including televisions and audio equipment. The manual specifies which models support universal programming and provides instructions for pairing with other devices. This compatibility enhances the remote's versatility, reducing the need for multiple remotes.

Setting Up Your Atlantic Broadband Remote Control

Proper setup of the Atlantic Broadband remote control is the first step to ensuring smooth operation. The process includes inserting batteries, syncing the remote with the cable box, and customizing settings to user preferences. The manual provides step-by-step guidance to complete these actions efficiently.

Inserting Batteries

Start by opening the battery compartment located on the back of the remote control. Insert two AAA batteries, ensuring correct polarity alignment as indicated inside the compartment. Using fresh, high-quality batteries is recommended to maintain optimal remote performance. After inserting the batteries, close the compartment securely.

Syncing with the Cable Box

To sync the remote with the Atlantic Broadband cable box, press and hold the “Setup” button until the LED light blinks. Enter the designated code for the cable box model, which is listed in the manual. Once the code is accepted, the LED will stay lit briefly and then turn off. Testing the remote by changing channels or adjusting volume confirms successful syncing. If the first code does not work, the manual provides alternative codes for different box models.

Customizing Settings

Users can customize settings such as language, display preferences, and parental controls using the remote. Accessing the settings menu via the “Menu” button allows navigation to these options. The manual explains how to adjust settings to enhance viewing experience and security, including locking specific channels or setting time limits for certain content.

To enter universal programming mode, press and hold the “Setup” button until the LED blinks twice. Then, enter the device category code followed by the manufacturer code found in the manual. The remote will confirm programming by blinking the LED light. Testing with device-specific buttons ensures the programming was successful.

Manual Code Search

If the user cannot find the correct code for their device, the manual provides a manual code search method. This involves pressing and holding certain buttons while cycling through possible codes until the device responds. This process can take time but guarantees compatibility with most devices.

Saving and Resetting Codes

Once a device code is entered and confirmed, it is saved in the remote’s

memory. The manual also explains how to reset the remote to factory settings if needed, which clears all programmed codes and returns the remote to its original state. Resetting may be necessary if programming errors occur or when transferring the remote to a new user.
