Understanding Guitar Chords

Before diving into the specific chords, it's crucial to understand what a guitar chord is. A chord is a combination of three or more notes played simultaneously. The most basic guitar chords consist of just three notes and are built from scales. Learning these chords allows you to play a wide variety of songs.

Chord Structure

Chords are made up of root notes and intervals. The root note is the note that gives the chord its name. The intervals are the distances between the notes. Here's a breakdown of the most common chord types:

- Major Chords: Bright and happy-sounding chords, made up of the root note, major third, and perfect fifth.
- Minor Chords: Often sound sad or melancholic, constructed with the root note, minor third, and perfect fifth.
- Seventh Chords: These add a seventh note to the major or minor chord, creating a more complex sound.
