- Downloading the appropriate version for your operating system.
- Following the installation instructions provided.

### **2. Exploring the Interface**

After installation, familiarize yourself with the user interface. Key components include:

- Canvas: The workspace where geometric constructions are created.
- Tool Palette: A collection of tools for creating and manipulating shapes.
- Script Editor: An area where you can write and edit G2K scripts.

### 3. Creating Your First Script

Start by creating a simple geometric model using the GUI. Once you are comfortable, try writing a basic G2K script. Here's a simple example to get you started:

```
```g2k
// Define a point
point A = (0, 0);

// Define another point
point B = (1, 1);

// Draw a line between points A and B
line AB = line(A, B);
```
```

This script defines two points and draws a line between them. As you become more familiar with the syntax and capabilities of the G2K script, you can create more complex models.
