Multiple choice questions (MCQs) are prevalent in assessments. These questions typically require students to select the correct answer from a list of options. Here are some examples:

- Question: What is the purpose of the OSI model?
- A) To define how data is transmitted over the internet
- B) To provide a framework for understanding network communication
- C) To specify the hardware components of a network
- D) To ensure data privacy

Answer: B) To provide a framework for understanding network communication

- Question: Which device is used to connect multiple networks and route traffic between them?
- A) Switch
- B) Hub
- C) Router
- D) Modem

Answer: C) Router

2. True/False Questions

True/false questions assess the ability to distinguish between correct and incorrect statements. Examples include:

- Statement: A switch operates at the network layer of the OSI model.
- Answer: False (A switch operates at the data link layer).
- Statement: The IPv4 address space is limited to 4.3 billion unique addresses.
- Answer: True.

3. Fill-in-the-Blank Questions

Fill-in-the-blank questions require students to recall specific terms or concepts. For instance:

- Question: The process of dividing a network into smaller, manageable segments is called _____.

Answer: Subnetting.

- Question: The protocol used for secure remote access is _____.

Answer: SSH (Secure Shell).

4. Scenario-Based Questions

These questions present a real-world scenario requiring critical thinking and application of knowledge. For example:

- Scenario: You are tasked with designing a network for a small business with 50 employees. The business requires internet access, file sharing, and printing capabilities. Which network topology would you recommend and why?

Answer: A star topology would be recommended because it allows for easy addition or removal of devices without disrupting the network. It also provides better performance and reliability compared to bus or ring topologies.
