Example 1: Sales Calculation

Problem: Daisy sells 25 donuts on Monday, 40 on Tuesday, and 30 on Wednesday. How many donuts did she sell in total?

Solution Process:

- Addition: $25 + 40 + 30 = 95$
- Answer: Daisy sold a total of 95 donuts.

Example 2: Profit Margin Calculation

Problem: Each donut costs \$1.50 to make and sells for \$2.50. What is the profit on each donut sold?

Solution Process:

- Profit = Selling Price - Cost Price
- Profit = $\$2.50 - \$1.50 = \$1.00$
- Answer: The profit on each donut sold is \$1.00.

Example 3: Fraction and Percentage Problem

Problem: If Daisy sold 60 donuts and 25% of them were chocolate, how many chocolate donuts did she sell?

Solution Process:

- Calculation: $25\% \text{ of } 60 = 0.25 \times 60 = 15$
- Answer: Daisy sold 15 chocolate donuts.
